

## Customers Testimonials for the DPE devices

Hello Richard,

I installed the DPE100 on the North side of my house this past Saturday the 11th of April. There was a very large storm system approaching the North Eastern United States, due to hit our area late Sunday night (Easter Sunday) and all of Monday, the 13th. The forecast was for very heavy rain and strong winds all Monday.

I awoke Monday morning to heavy rain and mild winds gusts. As the morning progressed, patches of blue sky appeared above our house and around the immediate vicinity. This continued throughout the day and by 3pm the rain had left and we were left with mild breezes and a decent day. I spoke to several people in the area, who were surprised that we did not get the bad effects of the storm. Yes, I replied, I guess we got lucky! Also, I would like to note that the national weather service was calling for localized tornadoes in our area. None materialized.

We did get some heavy cloudbursts which lasted maybe 10 minutes or so, then moved on, but NO violent weather.

I am absolutely convinced the DPE 100 shredded portions of this storm to bits in our immediate area. This is ground-breaking technology.

I would also confirm the calm feeling that seems to permeate our home. Everything used to feel energized, but now it seems to be more tranquil. I am so happy I purchased my DPE 100. At least I have helped several 100 people in my area of coverage and they hopefully are living calmer lives.

I write this letter as a testimonial to others who may be considering purchasing a unit.

If you are "on the fence", as the saying goes, take the plunge. You will not regret it.

I will continue to update your customers as the weeks and months go by.

Sincerely,

Mark Harrison April 15, 2020

Dear Richard,

As you know, I have a DPE100 in the ground near the FT Lauderdale International Airport. My good friend, Charlie, lives close to the airport. He practices alternative medicine and he, along with many of his patients, is very sensitive to EMF/RF frequencies. I thought Dr. Charlie's would be a good place to test it.

It was easy to plant in the ground and we immediately noticed a different feeling inside his condo unit. Charlie said that it was a feeling of stillness and calm and sometimes he felt like yelling just to see if he could break the calmness. Several of his clients noticed it, too, and one said, "Hey Charlie, what have you done? It feels different in here." He was

not complaining. I knew what he was talking about. I don't often feel those subtle energies, but I know something good is going on at his condo.

I live in an area that often gets hit by extreme weather conditions such as cloudbursts, tornadoes and hurricanes. I know that the weather can be manipulated, energized and even guided. I was looking for insurance, something that offered some protection and I have found it in the DPE100.

Let me explain. There was a cloudburst in February. I was going to visit Charlie and the rain was torrential. Cars were stalled on the Interstate highway and flooding was everywhere. It was slow going but when I got about 1.5 miles from Charlie's, the rain almost completely stopped. It was just a slight drizzle when I got to his place. I stayed there for two hours and then left. I got about 1.5 miles away and the downpour started again, but not at Charlie's!

Here is something else that was encouraging. I planted the DPE100 next Charlie's condo and a large, old bush. After a week, we noticed that the bush was sprouting new growth, and it seems that the shape of the bush has also changed. The branches seem to be growing out of the shade and moving into a position that provides more direct sunlight. I almost forgot to mention this - Charlie, can see more stars at night. We almost never see stars around here. They get lost in all the stuff that is being sprayed day and night above us. Pretty amazing.

I give the DPE100 five stars \*\*\*\*\*. It is a winner!!!

Thank you.

Harvey April 17, 2020

Update April 27

Dear Richard,

I have placed the second DPE100 in the ground at my condo. It is in an area that people sit around to relax and get sun. In the evening the mosquitos come out in force. I have not seen any. I will sit down there tonight without a shirt for an hour or so. If I don't get attacked, I will be talking with the folks at the city hall. The city pays a lot of money to spray those mosquitos. I'm going over to see how they handle those contracts. Going after the mosquitoes could turn out to be a huge big deal in Florida. It also should be easy to demonstrate how effective the DPE100 is in getting rid of that nuisance. This is definitely worth following up.

I feel like there is a calm stillness in my apartment. I am on the 9th floor. They were predicting severe weather, including tornadoes but it was pretty quiet here last night.

Stay well and safe.

Sincerely,

Harvey

Harvey subsequently videoed the "blue eye" above his DPE that several have reported. [Here is his brief video](#) of this phenomenon.

Hi Richard,

Have had it in the ground nine days. Had the second mother of all storms. Weather Channel radar showed us in purple and that color is new. Highest threat level. No damage at the farm. Neighbor in front of me lost a chestnut tree. Looked like it was put in a

blender. Nearby eight 100-year-old pecan trees and no damage at the adjacent little farm... Nothing on my 78-acre farm was damaged. Six miles away a huge area near the county road had hundreds of big trees toppled and more than 500 trees looked like the blender got them at about 10 feet from the ground; very strange. The Weather Channel predicted lots of rain with the storm but we got about an inch of slow rain, just like with the storm last week.

Storm damage to the county from Sunday night's mega storm was over 100 million dollars, just in this county!!! Pictures in the local paper show damage everywhere and one man was killed by a falling tree. He was a PhD at the local college. The DPE was obviously working.

There are two more weather systems that are predicted to pass over here in the next week. Both are predicted to bring severe weather and lots of rain.

I will keep you posted.

**Update May 1, 2020**

We have now had four mega storms in three weeks and not one bit of damage to the farm. Others in the county have had roofs torn off and in town seven miles away, not a single street without trees down and severe damage to commercial buildings, as well as homes in the town. As I drive thru town, I am very blessed to have the DPE 100.

Dr. Bill McFarland

**Update May 10, 2020**

Had another storm Friday night and it broke up over me and I got a little wind only. Wish I could afford the big unit. That would scare the weather mod guys.

Your friend,

Bill

**Update August 30, 2020**

I look at thousands of Pecan trees every week after a strong thunderstorm in this area. Big tree branches down almost everywhere. I have three big pecan trees in my yard and not a single tree branch ripped off since installing the DPE100 in the late winter at my farm.

Outstanding crop of apples, pears and especially scuppernongs (grapes) this year. Thank you, again.

Your friend and Christian Warrior

Bill

**Bill's DPE100 update September 16, 2020 in the midst of Hurricane Sally**

All is well here. 35 mph wind gusts for the last 24 hours but lots of rain and more to come tonight and tomorrow. Not excessively hard rain here and no flooding at the farm. Office is two miles away and all is ok here, also. People 40-50 miles south of here and on the coast not so lucky. Over 500,000 without electricity and many without phone service.

Smart people do not build or buy when the elevation is 2-5 feet above sea level. However, I know some really dumb ones who have lost all their cars, homes and anything else of value because they had to live near the ocean.

The blue top on the DPE100 is a great sight when I walk up the hill at my farm. No damage anywhere on the farm or close neighbors who are benefiting for free. Hope the rain clouds break up later today. Will keep you posted.

Your friend,  
Dr. Bill

The next morning:

The back end of Hurricane Sally literally broke into multiple very small isolated showers a few hours ago over this area. Forecast changed to light rain, now, and also partial sun all day (Thursday). Weather radar indicates at 1am, thirty or more small showers over a wide area here in south Alabama. Absolutely no flooding or ground erosion at the farm. No pecan tree limbs down or oak tree limbs down anywhere on the 78 acres. I can also report that there is no damage or excessive rain at my office, which is about 2 miles from the farm. There is a tree line 40 feet behind the office and no damage and no fallen limbs on or near any of the three buildings at the office complex. I plan to get a second unit in a few months to extend coverage on an expensive and very large barn I had built 17 years ago. The barn is almost a mile from the current unit. Today's cost for a new barn would be out of my reach. The DPE100 is really very cheap insurance, in my opinion. I am also extremely concerned with EMP issues along with 5G and I believe those concerns are a non-issue today. It is hard to explain the calm feeling I feel at the farm. I almost forgot that the pecans are at full maturity on the farm, almost two months early. My neighbor in front of the farm also has full maturity on his seven-hundred-year-old pecan trees. Richard can explain what is happening with the pecans better than me. Thanks to everyone who has worked on the DPE 100 project.  
Dr. Bill McFarland NMD  
aka silver man prepper

Hello my friend, my neighbour called me after a year. He has a wine grape vineyard and he remembered what I had told him last year about installing the DPE. He said the vines grew better and with very few pests. There was a huge increase in ladybugs, which feed on the parasites, and this has not happened for many years. Furthermore, no water bombs or storms with large hailstones occurred, which allowed the vines to grow strongly and unhindered. There has also been a change in the nesting of birds. There are many more swallows, but also a change in their habits. For the first time in his life he saw a cat playing with a magpie.  
A big hug!  
Giovanni

Hi Richard,

When we finally installed it, we took careful note of how we (a lady who lives here and me) were breathing. Both of us were able to breathe more easily within two or three minutes of installing the unit, which rather surprised me. I didn't think it would be as quick as that.

I have got a bit of a chest problem and it's been helped enormously by taking a dessertspoonful of overproof rum. Just as the day changes into night, I can feel the chest tighten a little bit. Now, I don't get that feeling. I'm still having the rum, but since that unit's been installed, that tightening has gone. I'm virtually a teetotaller, so drinking overproof rum, even a small quantity, was quite a learning experience!!!

The other thing that's most remarkable is that the animals here are quieter. We have horses and dogs and their behaviour changed overnight. The whole place is more placid. Also, a person that lives in the same house here had had a very bad fall from a horse 18 months ago and was still walking quite stiffly and with great difficulty. Everyone's been giving a bit of a hand and have done what they can to help, but since the DPE 100's been installed, something's happened and his body is much looser. So now we're getting somewhere and he's walking much, much better.

Although this is difficult to show to others, my intuition has improved dramatically since the DPE 100's been installed.

Robert April 21, 2020

Dear Richard,

It is about a month now since I installed my DPE 100.

Two days after, a storm with strong winds and hail tried to visit us from west and bent to North at the hidden border of the DPE. We had a gentle rain instead. The phenomenon repeated itself several times during the month, with drizzle when it was pouring rain nearby.

But the most fascinating is the repeated formation of a blue eye circle in the sky when everywhere else is still strongly cloudy. The first place to dissipate fog is above my property. So, it really affects weather and creates a kind of microclimate.

I have noticed that plants are growing faster and healthier. The man who is taking care of the vegetable garden doesn't understand what is happening.

More birds and new species are coming as well.

I have been trained in Biogeometry and checked the vibratory qualities of the DPE. It does counterbalance strongly the Geopathic discrepancies and installs a positive and healing field. It has all the same color frequencies and qualities of power places and healing spots, plus a strong component of blue emanating from the Earth.

I have noticed that it has a soothing and comfortable action on positive people, but negative ones don't appreciate it and leave. Perhaps, with time, they would harmonise as well?

I am very glad to have found this device. It would be nice to have an intermediate model between the DPE 100 and its big brother (DPE Shield). 15 kms would be ideal (and maybe more financially affordable) to install a stronger microclimate and create a positive influence to the community.

Best regards,

Thierry May 2020

Hi Richard,

My mother has said that she is no longer suffering from heart palpitations like she was prior to installing. A friend of ours who lives further up the road, closer to the 5G tower, has noted the same as she also had heart palpitations, but not now.

Kind regards,

Tracey August 2020

Hi Richard,

Well as you can see in the news, Hurricane Isaias is causing lots of damage up the East Coast of USA. It was still a Tropical storm when it came by the Florida East Coast this past Saturday night and Sunday day, August 1 and 2, 2020.

I took the precautions of tying things down that might fly around and covering a few plants, but that was all.

Then I waited....

There was very little wind, and very little rain.

When the TV Weather news came on... the reporters were scratching their heads, because the storm came straight up the Florida East Coast, but when it got to my area of Lantana and Lake Worth, FL, it bent around it to the East, like a curve ball in a baseball game, making a perfect half-moon bend before it returned to the Coast and got back on track.

Now I realize my DPE100 goes out only 2 miles around, and I am 10 miles from the Beach, and the storm center was about 30 miles off the shoreline.

But the DPE100 also goes up 200 miles into the air, so I have to believe, that it did something... a wonderful miracle trick... and caused that curve ball to protect my area.

Blessings to all,

Rev. Merriam Joan Handy

Hi Dr. Presser,

It has been interesting to notice the effects on our environment since we installed our DPE 100.

We feed a semi-feral, older beautiful feline that has taken up residence on our back porch. During the warm weather months, we have had a high failure rate beating small black ants to her left-over food left twice a day and picked up within an hour. Putting her food bowls in larger flat bowls surrounding her food with a moat, has been pretty effective. From day one, the small black ants disappeared! The small moat is no longer necessary!!! Our home is ruled by two, older, female felines. Both seem to be calmer, and more playful with us and each other. The energy in and around our home, does seem to be calmer.

Our bird feeders are being emptied faster than ever. It seems our bird population has exploded!!

These are just a few observations.

Thank you.

Christine

A happy customer. July, 2020

Hello Richard,

We have had our DPE 100 for about 3 weeks now. One of the things we have realized is that we are sleeping much deeper. Every month we work with a quantum physics energy healer and he measures the level of our adrenals. At our regular scheduled appointment (after only 3 weeks of the DPE 100 being installed), he checked our adrenals and saw positive increase in both my husband and myself. He said he has never seen this level of increase in just one month's time; it usually improves at a much slower rate - if at all. I then told him about the DPE 100 - we are excited to see as time goes on all the health benefits!

Thank you for making this product available Richard!

Carol

Hello Richard!

We have noticed some benefits from the DPE100:

- our immediate environment and air seem to be more vibrant and energy-charged
- the weather is more moderate.....no severe thunderstorms
- lots of magnificent rainbows when thunderstorms are in the vicinity
- we have more of a feeling of well being
- better quality rests and sleep
- greater appearance and activity of local fauna: birds, squirrels, rabbits, chipmunks, ground hogs

After only 1 week from installation, we can tentatively conclude that the DPE100 seems to be working.

Paul H.

Hello Richard,

I wanted to share these photos of the “Blue Eye” above our home in Pennsylvania and specifically the Chemtrail being torn apart by the DPE100. We have not had Chemtrails in our area for approximately 2 weeks, a welcome surprise. I was actually outside cooking on the grill and when I looked up. I was surprised to see this line trail.

I must say that when I first saw the trail it was thicker and more defined.

It very quickly was dispersed, to my surprise. As those who are aware and watch these horrible abominations, they gradually spread out in the sky and leave it a milky white, blocking out the sun. Not so today! The trail was dispersed unlike anything I have seen before. I am firmly convinced the DPE100 was directly responsible for this.

I urge all people to save your money to purchase one of these units. It may just save your life in these uncertain times.

And yes, I have a consistent “Blue eye” above and around our house and parts of our small city near the house.

This device is no joke. Thank you to our Brothers and Sisters for this technology.

I know my DPE100 has given me a peace of mind, both literally and figuratively. And the birds and squirrels and rabbits, oh my, how happy they are! The birds are constantly singing and chirping! I saw a rabbit sunning himself between some flower beds and when he saw me, he barely moved as I slowly approached him. He was so laid back I thought he was injured. He finally got up and hopped away, but I have never seen a rabbit so passive! He was just soaking in the rays and enjoying life without harmful radiation and 5G bombarding him!

What a treat this device is.

With love and respect,

Mark Harrison June 18, 2020

Feedback from Caroline Balanda

February 2, 2020

Hello Richard,

Just thought you would be pleased to get this great feedback; to me, it is amazing.

We have had a really bad infestation of mosquitoes. Our whole island, by about 3:30pm, if you were outside and the mosquitoes liked your blood, it was just terrible and the bites would last two weeks, scratching and itching awfully.

The first 12 months we were here, they were not a problem but for the next 4 years it was always "get indoors" because even though we used to spray insect repellents and special candles, it was never enough.

Guess what? Last night we sat outside and there wasn't one!!! I texted my neighbour, and he said that he didn't notice any, either, and believe me you can't miss them!!! He was very excited.

We have a beautiful park right on the border of where the DPE100 reaches, so I can't wait to see if it has been cleared, too, as it is full of animals and the council puts in a huge amount of work to keep it beautiful.

Anyway, how wonderful is that? 🙌🙌🙌

Have a good evening

Caroline

**February 4, 2020**

Hi Richard,

Yesterday, 3/2/20, storms were predicted for south-east Queensland and, as usual, the massive sheets of lightning were coming our way. We could see them from our dining table and I was starting to get very nervous as they sweep around and come down and head straight down the river, and all hell seems to break loose. Very scary. The last time we got hit, it was \$28,000 of damage, let alone the fright.

This time we watched the sheets of lightning come close to our area and it seemed to just quieten down and dissipate after a great light show.

Across the river from us, we could see the lightning way behind the houses, which usually ends up in our front yard. WELL, GUESS WHAT!!! It just settled down and didn't come any closer. Amazing!!! Was it just an unusual storm or did it stay out of our DPE ZONE???

However, all I can say it was different from what has happened before with the summer storms.

We sure will be taking notice when the next one comes.

Happy day

Caroline 🤝

Also, I noticed, not just over our area, but a change in our clouds in the sky over our city. Is this due to the DPE???

The clouds over the prior months during the fires really disturbed me as I had never seen such dense thick clouds over the Gold Coast so consistently, and it just didn't seem like it was all from the fires.

I would go out and look every day and it didn't seem to change for quite some time. Then they suddenly started to thin out, the density was shifting and the atmosphere seemed like with a feeling that everything is becoming OK, whereas before there was a very uneasy feeling about it all.

So, the clouds finally lightened up, we had a lot of rain but not too much of the destructive winds, a bit of flooding but we sure have had a lot worse. The lightning has definitely settled down. However, is this just what has happened this year and so it was normal or was there really some sort of, to me, big change for our February weather???

I don't know; only time will tell.

I have been hanging onto the center rod to clear myself quickly of energy, etc., that is not appropriate for me. Also, I made a bed of cushions right next to the window where the DPE is installed. Every day I rest and read there for an hour or two to help my body heal from a disease.

**March 10, 2020 update**

We haven't had any damage since we installed the DPE, plenty of heavy rain but no flooding, hail or lightning. Every previous year we have had really bad storms, lightning, floods and super strong winds for this time of the year but not now, isn't that fantastic; this is so different to what it has been since we came here over 40 years ago.

I will take a photo of the outside as it is now and it is very beautiful and not scary at all like the past years.

Most importantly, the DPE is very effective if I rest near it for about three hours and that brings my body back into balance that equals body comfort.

Extensive new plant growth fostered by the DPE 100

View of the calm, rainy outlook

Hi Richard,

My reasons for acquiring DPE 100 was firstly for providing environmental balance and protection.

There has been an increase in bird activity, leaves on all trees and shrubs are healthier looking, and the occasional Monarch butterfly hovers over the device. Also, the mosquitoes have not been as prevalent as they used to be. Other than that, I do not have any before and after points of reference to compare against, such as extreme weather conditions being less so or energetic interferences.

Kind regards,

John.

The following are from the original verification in Italy:

Davide, aged 54, lives in Sardinia (Italy) as a building contractor, and is a highly educated man.

For 25 years he has been suffering from uncontrolled tremors and sweats that disrupt his sleep at night. He tried to solve the problem from the medical point of view by spending large sums of money on visits and neurological therapies but without success, and his condition continued to worsen, and this was creating big problems with concentration in his work.

The inventor of the DPE 100 immediately understood that the cause of the problem was electromagnetic pollution; in fact, the person has been living in the same place for 35 years.

This pollution is caused by stray electromagnetic currents combined with geopathies. So, with the help of the Engineer Prof. Elio S. electronic engineer as well as an industrial electronic expert specialized also in electromagnetic pollution, he went with the inventor to do a verification of the environmental situation and see how the DPE 100 interacted with electromagnetic pollution.

A small hole was dug and the DPE 100 was installed, and the device filled with water. A drastic reduction in electromagnetic pollution values was noted and a further confirmation of the reduction was when Mr. Davide confirmed that he had slept beautifully and without tremors for the first time, something that had not happened for years.

Two children of Francesca T. from Veneto (Italy) presented classic radiation burns, where the detachment of significant skin portions occurred, with severe pain, insomnia, etc. The parents had taken them to the best specialist doctors throughout Europe without finding a solution.

After many difficulties, the father happened to meet the inventor of the DPE 100, who immediately explained to him that his children had damage due to radiation exposures and that with a portable version of the DPE 100 with special ground connections, it could immediately solve the problem. Indeed, within 3 days the boys had returned to normal. Needless to say, the parents were skeptical at first because they did not know that high-voltage electrical cables were running under their house, but the strongest emotion was seeing their children completely restored. Their feeling of gratitude was truly profound.

**Testimony of Claudio L. in the Lombardy region (Italy).**

**On 11 June 2019 a hailstorm with hailstones of 4 cm in diameter caused considerable damage in the villages near Lucca, but in the area where the DPE 100 was positioned, only rain occurred.**

**A witness was amazed to see the circular coverage area of more than 1 km radius produced by the DPE 100, outside of which large hailstones fell, causing widespread damage in the entire area outside of the DPE 100's protected zone.**

**Testimony of Giovanni L. in the Puglia region (Italy).**

**He could see a positive change in the climate; more harmonious with less temperature changes, the sky clearer, the daylight different and the air has become lighter and cleaner; different.**

**A surprising finding was that the bad smells of a farm with 300 horses, 700m distant and those of a farm with a thousand cows a further km away, disappeared.**

**An increase in sleep quality and consistent strengthening of the immune system occurred after one month.**

**Minimum stay of chemtrails and their displacement outside the area of the DPE.**

**An increase in sleep quality.**

**He also noted a considerable reduction in the number of predicted extreme weather forecasts and those that actually occurred. It is surprising to see, again, the thunderstorms we used to see as children and that we had already forgotten.**

**Although heavy weather was forecast with hail, the meteorological situation was moderate over the entire area of action of the DPE, but outside the area the expected meteorological situation occurred.**

**<https://www.lagazzettadelmezzogiorno.it/news/foggia/1169713/bomba-d-acqua-a-foggia-allagamenti-nel-centro-cittadino.html>**

**Testimony by Daniele G. in the Emilia Romagna region (Italy).**

**He also confirmed the different and positive meteorological situation within the area of the DPE 100. The different air quality, the better quality of sleep, the decrease in stress and the feeling of living as in a "protected" area. Normal rainfall occurs, unlike the forecast weather.**

**Hi Richard,**

**Motivation**

**The reasons for my purchase of the DPE are multiple. Of course, the protection from 5G and extreme weather events are upfront. But also, the potential health benefits and last but not least the contribution to restoring health to Mother Earth. And I also am an early adopter for new technologies, so I 'had to have it '.**

**Results**

**I earlier reported a noticeable improvement in sleep quantity and quality. This has eroded a little because I have many restless nights, due to the heavy energies around us. Sadly, the DPE cannot save me from that. If I sleep, however, the sleep is deeper and I feel more rested in the morning.**

I earlier reported on the reduction of the smoke and smell of the yearend fireworks. Within 30 minutes all was removed.

As for the several healing wishes I have, it's probably too early to be able to get real results. I feel that the DPE, the Advanced Technology 7 Health Pad and the [NANO SOMA](#) together are a beautiful mix that will work its wonders later on.

That's all for now, Richard.

To be continued.

Love from Monique

The DPE 100 creates a zone of about 500 metres in radius where nature responds very positively. Here is a summary from my Italian friend:

**I explain now why and my experience.**

**I planted a vegetable garden and the plants grew luxuriantly, and this allowed me to have an excellent survival rate of those that I planted. However, the most amazing factor is that the DPE has made their immune system strong to such an extent that they are almost completely protected from parasites. Caterpillars and other pests have always been a problem in previous years.**

**Another very important factor is that I only watered when I planted but the plants grow and develop as if they received water every day.**

**Also, I noticed another strange thing.**

**Usually when other "weeds" grow next to the vegetables, it is common practice in agriculture to eradicate them because they take nourishment and water from the vegetables. When I tried to do this, the nearby vegetable garden started to dry out, as if these plants were now more sensitive.**

**A month ago, I put 10 hens in an area near the DPE. After the first week, they became more docile. After a month, they approached to be caressed, but the most interesting thing is that the breeder who sold them to me told me to cut the wing feathers or otherwise they will fly away. I didn't want to cut them and left them the choice to go away or stay. They all continue to remain.**

**Even the eggs are bigger.**

**Giovanni**
